EDUCATION

University of California, Berkeley

Electrical Engineering & Computer Sciences B.S.

Berkeley, CA

June 2026 - May 2028

- **Courses:** Structures and Interpretations of Computer Programs, Data Structures, Discrete Mathematics and Probability Theory, Introduction to Signals and Dynamics

EXPERIENCE/VOLUNTEERING

Charger Rocketry

Founder/Chief Operations Officer/Captain

Cypress, CA

February 2025 - May 2026

- Founded Cypress College's first team-based collaborative engineering design project focused on the research, development, and construction of a solid-propellant rocket.
- Built the project in collaboration with STEM² and MESA to provide students with hands-on experience in collegiate-level aerospace engineering design.
- Led day-to-day operations, including recruitment, event planning, competition proposals, team meetings, and coordination with chief engineers and subteam leads.
- Managed cross-functional collaboration across engineering subteams to support rocket design, testing, safety planning, and project execution.

Cypress College Science Tutoring Center

Physics and Chemistry Tutor

Cypress, CA

August 2025 - June 2026

- Provided one-on-one and drop-in tutoring for students in physics and chemistry, supporting coursework in mechanics, electricity and magnetism, general chemistry, and lab-based problem solving.
- Broke down challenging STEM concepts into clear, step-by-step explanations to improve student understanding and exam readiness.
- Guided students through homework, conceptual questions, and quantitative problem-solving strategies.

Won Research Lab

Machine Learning Research Assistant

Irvine, CA

February 2025 - May 2025

- Conducted research on liquid-solid-vapor interactions and transport phenomena for applications in electronics cooling, energy efficiency, water systems, and manufacturing processes.
- Used MATLAB and Python to process, model, and visualize cold plate performance data across multiple design configurations.
- Applied NSGA-II optimization methods to identify Pareto-optimal cold plate designs based on competing thermal and performance objectives.
- Contributed to the preparation and submission of a cold plate research paper for the IEEE ITherm conference

Turple Safe Spaces

Co-Founder

Buena Park, CA

May 2023 - Present

- With the guidance of Hope School, a school for primarily neurodivergent students, founded an organization to design a safe sensory space for Hope students
- Designed a sensory space to help students with ASD destress from overstimulating environments. Designed in CAD and built from scratch. Installed it at Hope School, where it is still in use.
- Received a \$10,000 grant for non-profits from KFC to help fund this project.
- Created a podcast that covered topics on neurodiversity awareness and hosted multiple neurodivergent students as guests.

Projects

Earlysignal.fm

January 2026

- Designed a music-market simulation platform where users invest virtual credits in emerging artists based on growth signals such as monthly listeners, album performance, and social engagement.

- Developed the product concept around gamified music discovery, combining artist analytics, prediction mechanics, and portfolio-style user interaction.
- Designed a PostgreSQL database schema to store artist profiles, user portfolios, virtual transactions, and time-series performance metrics for tracking artist growth over time.

SKILLS

Languages (ordered by proficiency): Python (Pandas, Numpy, Matplotlib), Java, C++, MATLAB, JavaScript

Tools and Frameworks: Node.js, React.js, PyTorch, Git
